## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### *Specification*

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

3. The abstract of the disclosure is objected to because it contains an extraneous word such as "invention". Correction is required. See MPEP § 608.01(b).

4. Claims 4 and 8 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim 3 and 7. See MPEP § 608.01(n). Accordingly, the claims 4 and 8 not been further treated on the merits.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-3, 5-7 and 9-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shiego et al (JP11224127).

Shiego teaches a hot plate comprising a supporting case 4 and a substrate 1 with a heater 2, and a cooling means including a fluid tank 13, cooling chamber 4, a valve 6, inflow hole 5a and outflow hole 5b (See an Abstract), but does not teach a thickness of a supporting case. It would have been obvious to one having ordinary skill in the art to adapt a modified invention of Shiego to use a supporting case having a thickness of 50 mm or less because by law of physics a thermal mass of a case with lower thickness is less than thermal mass of the case with a higher thickness and therefore a case with thickness of 50 mm or less is more adaptable for quick and forcible cooling.
